

## Colour Code Game (Ver. 1.1)

### Instructions

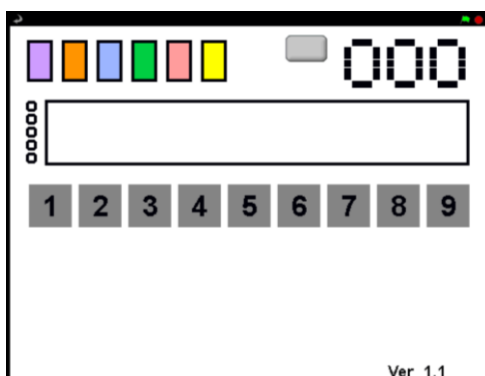

0. Press the green flag on the top-right corner to run a new game. When executing the file, a new game will run automatically.
1. **Please change your IME(input method) to the default ASCII one.**
2. When the **NEW** button appears, click the button once or press the “n” key to start a new round.

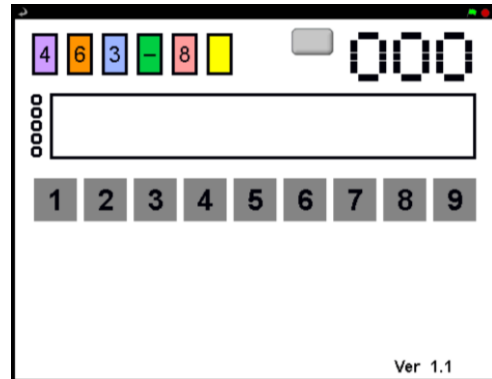

3. When a round starts, the system will assign 6 colours randomly to 6 different number grids. Please remember the numbers and their corresponding colours within 5 seconds, and the remaining time for memorizing is indicated by the vertical dots on the left.

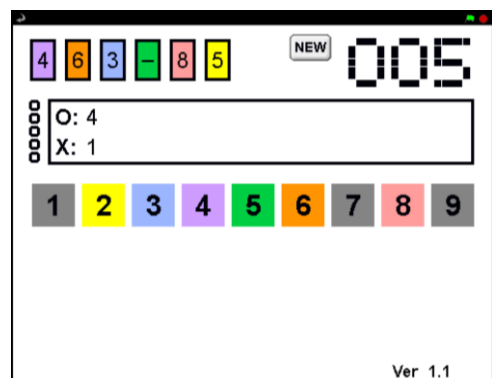

4. After 5 seconds, the colours on the numbers will fade out, and a colour code will be generated on the top left corner.

5. Fill in the corresponding number for each colour from left to right by entering number keys. If you forgot the number for some colours, press the “0” key to withdraw that colour without penalty. **Note that there is only one take and hence you cannot go back to change your previous answers.** The time indicator will flow for 10 seconds during this process for seeking time bonus only, there is neither a time limit nor a late-submission penalty.

6. After you input the colour code, the system will check your answers and display the accumulated score at the top right corner. The score for each round is calculated based on the **difference of number of correct and incorrect codes**, as well as the **time bonus** (which will be capped by the first factor to avoid the abuse of time bonus). Moreover, if you recovered the code perfectly (= 6 correct + 0 incorrect + 0 withdrawn, no time limit) for 2 consecutive rounds, an **accuracy combo bonus** will also be granted.

7. Back to step 2. to start a new round.
